

Assignment-VI on JAVA programming

1. WAP in java to create an applet that displays a background image. Implement functionality to play a sound file when the applet starts. Include buttons to control the sound (play, pause, stop). Allow the user to select different background images from a predefined set (e.g., using a dropdown menu or buttons).
2. WAP in java to draw several shapes (rectangles, circles, lines, polygons) on the applet using different colours and fonts. Implement a simple animation, such as a moving shape or color change, using the `Timer` class.
